OY2 Easter Islanders OY2

177 Today one's initial contact with Easter Island natives and their village of Hangaroa creates the definite illusion that here acculturation toward a Chilean pattern approaches completion and it is only a question of the government's passing the necessary laws to give them the right to vote until final absorption will be well on its way. Such traits as European style frame or cement-walled houses with corrugated-tin roofs, the full acceptance of the riding aspect of horse culture, the occasional use of ox carts and ox-drawn plows, and the complete acceptance of European style clothing, including well polished shoes on Sunday, reflect a more rural Continental setting than a Polynesian-inhabited island in the Pacific. Contacting the Chilean officials, one soon meets their native aides: mechanics who can take a Jeep apart and put it together again; a machinist renowned for fixing the most delicate wrist watches on the island; a budding meteorologist who, for the past two years, has been one of the instrument observers at the Chilean Air Force meteorological station. These are, to be sure, extreme cases, often representing men who have been sent to Chile for advanced education or who have made a living on the continent for several years. However, they fit so well into the observed modification toward Chilean culture that their somewhat extreme positions in the acculturation pattern are not readily apparent. Certainly Easter Island, [105] seen from an archaeologist's point of view, i.e., from the material culture evidence, presents a picture in 1956 of a dominantly Europeanized culture with a minor lag showing up in such things as the continued use of adzes, now made of steel, a customarily separate kitchen in the family architectural layout, a continued use of certain Polynesian foods, and a highly developed woodcarving tradition obviously kept alive by the products' salability to the tourists during their annual invasion of the island.

121 During the five month excavation season of the Norwegian Archaeological Expedition to Easter Island, no time was available for an intensive study of Rapanui culture as it is today. However, through director Thor Heyerdahl's interest in aiding the islanders' economy by using them wherever possible, opportunity was made available to the archaeologists to gather ethnographic data. During my 115 excavation of various sites on the volcano of Rano Kao I employed four Easter 124 Islanders: Jorge Tepano, Roberto Tepano, Juan Atan, and Rafael Roe. These men, perforce, served as my informants, the periods of "interview" consisting of directed conversations while riding up the volcano to work, during the lunch hour, and again during the afternoon descent. These were occasionally supplemented by specific appointments, usually with Jorge Tepano, the most knowledgeable of the four. There was no time nor opportunity to cross-check my information with natives other than my four workers, so that the data presented below are
